

EVI-Like Test 1 — Full Simulation

Level: B1-B2 (CEI standard) | Total: 30 questions | Time: 45 minutes | No dictionary

This test replicates the format, difficulty, and question style of the official CEI English block.

Task 1 (

Task 1 — Matching (Questions 1-6)

Read the texts (1-6). Match each text with the most suitable heading (A-H).

There a

- A) Addressing the ethical implications of a new technology
- B) Highlighting a shift in consumer preferences toward local products
- C) Describing the challenges of preserving endangered minority languages
- D) Explaining a breakthrough in renewable energy storage
- E) Reporting changes to urban transport infrastructure
- F) Analysing the psychological effects of long-term isolation
- G) Calling for international cooperation on a public health issue
- H) Discussing unequal access to higher education

1. Lithium-ion batteries, while effective, struggle to store energy generated by wind and solar panels during periods of low demand. Researchers at several European universities are testing solid-state alternatives capable of retaining charge for weeks rather than hours, potentially transforming the viability of off-grid communities.

2. In four cities across the country, dedicated bus corridors are being converted into light rail lines, while the existing metro network will be extended by twelve kilometres by 2028. Authorities hope the investment will cut commuting times by an average of twenty minutes for over half a million daily travellers.

3. When speakers of a language number fewer than a thousand, transmission to younger generations becomes precarious. Linguists working in remote communities record oral traditions, compile dictionaries, and train local teachers, yet funding shortfalls and rural depopulation continue to threaten efforts to reverse decline.

4. Acceptance rates at elite institutions reveal persistent patterns: applicants from the wealthiest households are significantly more likely to secure a place than equally qualified candidates from disadvantaged backgrounds. Critics argue that legacy admissions, unpaid internship requirements, and high application fees compound the problem.

5. The proliferation of deepfake technology — software capable of superimposing one person's face onto another's body in video — raises urgent questions about consent, defamation, and electoral interference. Lawmakers and technology companies have yet to agree on a regulatory framework that balances freedom of expression with protection from harm.

6. Extended periods of social isolation produce measurable changes in brain structure, particularly in regions associated with empathy and threat response. Studies of individuals who spent months alone in polar research stations or during quarantine reveal heightened anxiety, impaired

Task 2 — Multiple Choice (Questions 7-11)

Text: The Paradox of Choice in Modern Education

The democratisation of online learning has, paradoxically, introduced new barriers for many learners. Where once the obstacle was access — too few universities, too little money, too great a distance — the challenge now is discernment: how to navigate an overwhelming catalogue of courses, credentials, and platforms, each claiming to offer the fastest route to career advancement.

Researchers at a leading education policy institute tracked three thousand adult learners over two years, monitoring which types of online programmes they enrolled in, completed, and subsequently applied in their professional lives. The findings were sobering. While enrolment rates were high, completion rates hovered below thirty per cent for self-paced courses lasting more than four weeks. Learners who dropped out cited not a lack of interest, but decision fatigue — the cognitive exhaustion that follows excessive choice-making.

The implications for course designers are significant. Shorter, modular content with clear progression paths dramatically improved completion rates in the study. Learners who were assigned a structured sequence — rather than choosing freely from a menu — showed a forty-two per cent higher completion rate and reported greater confidence in applying new skills.

Yet the debate is not settled. Critics of over-structured e-learning argue that autonomy is itself a core skill of lifelong learning. If institutions design away the experience of choosing and self-directing, they may produce graduates who are technically proficient but ill-equipped to manage their own professional development in an environment that changes faster than any curriculum can track.

7. What does the writer mean by "the paradox of choice"?

• A) Hav

8. What did the research reveal about self-paced online courses lasting more than four weeks?

• A) The

9. According to the study, why did most learners drop out of online courses?

• A) The

10. What improved completion rates in the study?

• A) Lon

11. What concern do critics raise about highly structured e-learning?

• A) It m

Task 3 — Gapped Text (Questions 12-30)

Read the text. Choose the best option (A, B, C, or D) for each gap.

The Changing Landscape of Graduate Employability

The relationship between higher education and employment has (12)_____ considerably over the past two decades. A generation ago, holding a bachelor's degree was widely regarded as a reliable (13)_____ of economic security. Today, with degree-holder numbers having tripled in many countries, the credential alone (14)_____ little guarantee of a competitive advantage in the labour market.

Employers consistently cite skills gaps as a central concern. While graduates demonstrate strong subject knowledge, many (15)_____ to articulate transferable competencies — critical thinking, adaptability, and collaborative problem-solving — in ways that resonate with hiring managers. Universities have responded by embedding work-based learning, capstone projects, and mentoring programmes (16)_____ their curricula, yet implementation varies widely in quality and depth.

The rise of alternative credentials has further complicated the picture. Micro-credentials, digital badges, and professional certifications offered by industry bodies have gained traction, (17)_____ in fast-changing fields such as data science, cybersecurity, and digital marketing. Some employers now prioritise these demonstrable, up-to-date qualifications (18)_____ a traditional degree from an institution whose curriculum may lag behind industry needs by several years.

Graduate employability is also shaped by factors (19)_____ academic performance. Participation in student societies, voluntary work, international exchange, and part-time employment during study all contribute to the portfolio of experiences that distinguish candidates in competitive recruitment processes. Research (20)_____ that graduates with diverse extracurricular histories are perceived as more resilient and socially intelligent by interviewers.

Geographical disparities (21)_____ the picture further. Graduates from institutions located in or near major economic centres benefit from proximity to employers, internship opportunities, and professional networks. Those from peripheral regions often face structural disadvantages that credentials alone cannot compensate (22)_____.

Policy responses vary. Some governments have introduced graduate employment leagues, ranking institutions (23)_____ the proportion of graduates in employment or further study six months after graduation. (24)_____ these rankings incentivise accountability, critics argue that they encourage universities to prioritise easily measured outcomes over deeper intellectual development.

The conversation about graduate employability cannot (25)_____ without addressing equity. First-generation university students and those from lower socioeconomic backgrounds are (26)_____ likely to access high-value internships and professional networks during their studies. Without targeted institutional support, the benefits of higher education risk (27)_____ concentrated among those who were already privileged.

Digital literacy has emerged as a cross-cutting requirement across virtually all graduate roles. (28)_____ the specific technical tools vary between industries, the capacity to learn new platforms quickly, work with data, and communicate professionally in digital environments (29)_____ considered baseline expectations rather than specialist skills.

In summary, graduate employability today demands a combination of academic rigour, practical experience, and self-awareness. Students who approach their studies (30)_____ — engaging beyond the classroom and building a deliberate portfolio of skills — are best positioned to translate their qualifications into meaningful careers.

Gap	A	B	C	D
(12)	shifted	shifting	shift	been shifted
(13)	guarantee	guarantor	guaranteed	guaranteeing
(14)	offers	provided	offer	is offering
(15)	struggle	are struggling	struggled	have struggle
(16)	into	within	across	inside
(17)	particularly	partial	particular	in particular to
(18)	over	above	than	rather than
(19)	beside	beyond	outside	besides
(20)	suggests	suggest	is suggesting	suggested
(21)	complicate	complicates	complicated	are complicating
(22)	for	against	off	over
(23)	on	by	according	for
(24)	While	Although	However	Despite
(25)	be proceeded	proceed	be complete	be held
(26)	less	least	fewer	fewest

(30)	strategically	strategic	strategy	strategist

Score Guide

Score	Action
23-30 / 30	Exam-ready — simulate under strict timed conditions
16-22 / 30	Strong foundation — focus on discourse markers and word formation
10-15 / 30	Keep working — review passive constructions and complex connectors
< 10 / 30	Not yet ready — return to A2-B1 tests
