

EVI-Like Test 2 — Full Simulation

Level: B1-B2 (€BI standard) | Total: 30 questions | Time: 45 minutes | No dictionary

This test replicates the format, difficulty, and question style of the official €BI English block.

Task 1 (

Task 1 — Matching (Questions 1-6)

Read the texts (1-6). Match each text with the most suitable heading (A-H).

There a

- A) Examining the social consequences of urbanisation
- B) Questioning the long-term effects of a popular dietary trend
- C) Describing efforts to make cultural heritage accessible online
- D) Outlining a scientific approach to measuring happiness
- E) Reporting a rise in self-employment among young professionals
- F) Exploring how sleep deprivation affects academic performance
- G) Arguing for stronger consumer protection in digital markets
- H) Discussing the environmental cost of fast fashion

1. Each year, the global textile industry produces an estimated 92 million tonnes of waste. The rapid production cycle of fast fashion — where designs move from runway to retail in as little as two weeks — incentivises disposability over durability. Synthetic fibres, which account for over 60% of all clothing, take hundreds of years to decompose in landfill.

2. Researchers at Oxford University have spent a decade attempting to quantify subjective wellbeing using neuroimaging, longitudinal surveys, and economic data. Their model suggests that social connection, meaningful activity, and perceived autonomy are stronger predictors of life satisfaction than income above a moderate threshold.

3. More than 15,000 museums, galleries, and archives worldwide have uploaded high-resolution images, 3D scans, and digitised manuscripts to public repositories. Initiatives such as the Google Arts and Culture platform allow anyone with an internet connection to examine brushstrokes on a Vermeer or turn the pages of a medieval illuminated manuscript.

4. A meta-analysis of 61 studies involving over 40,000 participants found that sleeping fewer than six hours per night was associated with significantly lower scores in working memory, attention, and executive function. Students who consistently slept less before examinations performed an average of 12% worse than those with regular sleep of at least seven hours.

5. Subscription services, algorithmic pricing, and personalised advertising have created an environment where consumers often cannot determine the true cost of a product or the basis on which prices are set. Regulators in the EU have proposed mandatory pricing transparency, an end to targeted dynamic pricing, and a right to human review of automated decisions.

6. In cities with populations above two million, rates of depression and anxiety tend to run approximately 20% higher than in smaller towns and rural areas. Urban density, noise pollution, reduced access to green space, and weakened community bonds are among the factors

Task 2 — Multiple Choice (Questions 7-11)

Text: The Science of Bilingualism

For much of the twentieth century, bilingualism was viewed with suspicion in educational circles. Early studies suggested that children exposed to two languages simultaneously developed each one more slowly than monolingual peers, leading some educators to advise parents to choose a single language for home use. More recent research has overturned this view comprehensively.

Neuroscientific studies using brain-imaging technology reveal that managing two languages exercises the brain's executive control system — the network responsible for filtering distractions, switching between tasks, and resolving cognitive conflicts. Bilinguals, particularly those who have used two languages regularly from childhood, show measurably better performance in tasks requiring sustained attention and mental flexibility. Crucially, these effects extend beyond linguistic tasks into domains such as mathematics, problem-solving, and navigation.

The cognitive benefits of bilingualism appear to intensify with use. Adults who continue to speak both languages daily show delayed onset of dementia symptoms compared to monolinguals with equivalent education and socioeconomic backgrounds — an average delay of four to five years in several landmark studies. Researchers attribute this to what they call "cognitive reserve": the brain's accumulated capacity to compensate for neurological damage.

However, not all researchers are convinced. A minority of studies have failed to replicate the bilingual advantage in laboratory conditions, leading some scientists to argue that the benefits may be overstated or context-dependent. Cultural, socioeconomic, and motivational variables are difficult to isolate in studies of this kind, and publication bias — the tendency to publish positive findings over null results — may have skewed the evidence base.

7. How was bilingualism viewed by some educators in the twentieth century?

• A) As a

8. What does managing two languages exercise, according to neuroscientific studies?

• A) Lon

9. What do studies show about bilingual adults who continue using both languages daily?

• A) The

10. What term do researchers use to describe the brain's capacity to compensate for neurological damage?

• A) Neu

Task 3 — Gapped Text (Questions 12-30)

Read the text. Choose the best option (A, B, C, or D) for each gap.

Intercultural Communication in Global Organisations

As organisations expand (12)_____ national borders, the ability to communicate effectively across cultural lines has become as important as technical expertise. Misunderstandings that (13)_____ from cultural differences — in communication styles, attitudes to hierarchy, or interpretations of silence — can undermine collaboration, damage professional relationships, and erode trust.

Research in the field distinguishes between "high-context" and "low-context" communication cultures. In high-context cultures, (14)_____ in East Asia and the Middle East, much of the meaning in a conversation is conveyed implicitly — through tone, context, and shared assumptions. Speakers expect their interlocutors to (15)_____ meaning from what is not said as much as from what is stated directly. In low-context cultures, (16)_____ Northern Europe and North America, communication tends to be explicit, direct, and task-focused. Instructions are expected to be clear, (17)_____ ambiguity avoided.

These differences create predictable friction in multinational teams. A British manager (18)_____ feedback indirectly — "perhaps you might consider revising that section" — may find that a colleague accustomed to more direct communication interprets the suggestion (19)_____ a mild preference rather than an important correction. Conversely, a highly direct comment that (20)_____ routine in one culture may be experienced as aggressive or disrespectful in another.

Organisations that invest in intercultural training report (21)_____ fewer breakdowns in communication and stronger performance in cross-border teams. Training programmes typically combine theoretical frameworks with role-play scenarios (22)_____ enable participants to experience and reflect on cultural differences (23)_____ a safe environment. Awareness alone, however, is not sufficient. Competence develops through sustained exposure, feedback, and a (24)_____ to examine one's own cultural assumptions critically.

Technology has introduced new (25)_____ into intercultural communication. Video calls, email, and instant messaging all (26)_____ non-verbal cues — facial microexpressions, body posture, spatial distance — that carry significant meaning in face-to-face interaction. The (27)_____ of these cues increases the risk of misinterpretation, particularly for individuals whose cultural background places heavy reliance on non-verbal signals.

Lingua franca English deserves special attention. When neither party is communicating (28)_____ their first language, both face an additional cognitive load while simultaneously navigating cultural differences. Research suggests that slower speech, more explicit phrasing, and frequent comprehension checks can (29)_____ the burden significantly.

Ultimately, effective intercultural communication is not about (30)_____ one's own cultural identity but about developing the flexibility to adapt communication strategies to the context and the needs of the interlocutor.

Gap	A	B	C	D
(12)	across	over	through	beyond
(13)	arise	arises	arose	have arisen
(14)	common	such as	including	as
(15)	infer	imply	refer	derive
(16)	such as	common in	like	including of
(17)	with	and	but	so
(18)	who delivers	delivering	delivered	to deliver
(19)	like	as	for	in
(20)	is considered	considers	considering	was considering
(21)	significantly	significant	significance	signifying
(22)	which	who	whose	where
(23)	within	in	inside	into
(24)	willingness	willing	will	want
(25)	challenges	challenge	challenger	challenging
(26)	strip	stripped	strip away	strip out
(27)	absence	lack	removal	loss
(28)	with	in	by	through
(29)	reduce	decrease	alleviate	lessen to
(30)	abandoning	abandon	abandoned	abandonment

Score Guide

Score	Action
23-30 / 30	Exam-ready — simulate under strict timed conditions
16-22 / 30	Strong foundation — focus on discourse markers and word formation
10-15 / 30	Keep working — review passive constructions and complex connectors
< 10 / 30	Not yet ready — return to A2-B1 tests
